Notes of Significance

Great Basin
Coordination Center

Evening Brief

Date/Time Stamp: **Wednesday, August 03, 2016 - 10:25 PM**

Weather Summary

***** HIGH RISK Thursday / Friday for Lightning Central and Northern NV/Southwest ID *****

Temperatures will quickly warm again Thursday and Friday. The cold front will push slowly south through northern UT/Central NV today which will suppress thunderstorms further south today over mainly the southern half of UT into eastern/southern NV.

A low will approach Northern CA on Thursday which will bring moisture and **thunderstorms north again** into central/northeast NV on Thursday. These storms will be wetter over eastern NV, but a mix of wet/dry further north and west. Lightning may continue overnight Thursday night as they spread into northern NV, then continue Friday over northern NV/southwest ID. (See **HIGH RISK** areas for **Lightning**) These thunderstorms will have rain with them, however fuels are very critical in these areas. Therefore any drier strikes will increase fire potential, and drier weather quickly moves in from southwest to northeast across NV/ID Friday/Saturday ahead of a deeper trough and spreads across UT later this weekend into next week with prolonged dry weather expected.

Another low looks to move across ID later this weekend into early next week which will push another cold front through the northern Great Basin. Gusty winds and cooler temperatures may occur with the front.

Preparedness Levels

Current:

Great Basin	4
National	3

Great Basin Fire Activity: Moderate Initial Attack

New Fires and Acres: 27 fires for 6,132 acres 14,043 large fire growth

Great Basin Fire Potential Summary

***** Fuels at Record Dry Levels in Many Areas over the Northern Half of the Great Basin *****

ERCs have decreased significantly over eastern and southern Utah into southern NV where higher RH/wetting rains with thunderstorms developed over the past few days. However, ERCs elsewhere are very high, with **many areas in the 90th to 97th percentile**. Some areas of Western and Northern NV have not had measurable rain for nearly 2 months.

Live fuel moisture across much of Western UT and most of NV are near record dry levels as well.

These extremely dry fuel conditions across Nevada/Idaho/Western and Northern Utah/Wyoming will play a critical role in fire potential as lightning returns in some areas this week, followed by dry weather and some wind.

A Fuel and Fire Behavior Advisory is also in effect for the Northern half of Nevada, Southwest Idaho and Northwest Utah.

For more detail, see Great Basin 7-Day Fire Potential Outlook

Resources:

- Mobilized WY IMT 3 Markason/Steffens to Tokewanna incident in the Rocky Mountain geographic area.
- As Great Basin Buying Teams become available they will be supporting the Great Basin and not traveling outside the GACC.
- 43 Helicopters Assigned in the Great Basin
 - 23 Type 1 & Type 2 Helicopters
- Flaming Gorge Wildland Fire Module T2 is available
- National and initial attack resources within the Great Basin are heavily committed. Competition for resources is substantial.
